

What can you find in the water?

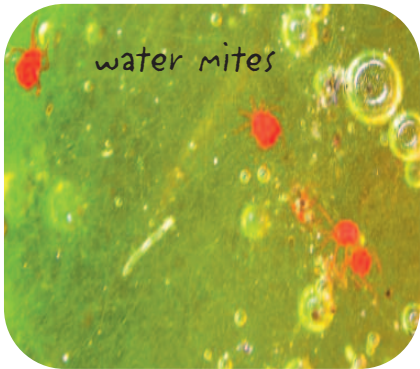

These 4 creatures are all going to grow into something else, but first of all they have to live underwater until they're ready to change!

Pay attention to the number of legs, tails and the shape of the body

You'll easily identify this one as it 'skates' along the surface of the water

Water beetle is a general name for any beetle that can live in water

Lesser water boatmen swim on their fronts while Greater water boatman (or backswimmers), swim on their backs!

Water mites are so small you might not spot them unless you look really closely

This scorpion doesn't have a sting in his tail, instead he uses it like a snorkel!
